Minutes of IAB (Faculty of Computing) held on 28th Feb 2025

SEECS Conference Room

Key Discussion Points:

- **Opening Remarks:**
  The meeting was chaired by the Principal SEECS, who also delivered the opening remarks.
- **Presentation Sharing:**
  The Principal recommended that the SEECS presentation be shared with industry representatives at least one week in advance of such meetings.
- **Input from Alfoze Technologies:**
  Mr Muazzam Bhatti emphasised the need for graduates to demonstrate flexibility, productivity, and familiarity with industry-relevant AI tools. He noted that as long as productivity improves, it is acceptable for students to use tools like ChatGPT or DeepSeek, as these are part of modern workflows.
- The CEO Emumba, recommended incorporating additional courses into the curriculum to better prepare students for industry demands. He recommended adding Quantum Computing course to the curriculum. He emphasized the inclusion of topics such as critical thinking, problem solving, AI agents, reverse engineering, data science algorithms, service delivery, and modern industry tools. These additions aim to equip graduates with the practical skills and mindset needed to thrive in a fast-evolving technological landscape.
- He highlighted that Emumba seeks graduates who are highly productive, quick to unlearn and adapt, and capable of solving real-world problems. He introduced the idea of "Innovation on the Edge", emphasizing that courses should remain current with fast-evolving industry trends. Faculty are encouraged to continually ask themselves, even taking student input where appropriate. Internal innovation at SEECS was encouraged rather than relying solely on external feedback.
- **Remarks by Associate Dean FOC:**
  The Associate Dean highlighted that at SEECS, students are intentionally guided through a structured learning progression—acquiring foundational knowledge during the first and second years, followed by a stronger emphasis on practical application, innovation, and professional diligence in the third and fourth years.

- **Input from Easypaisa:**

  Mr Ammar stressed the importance of strong foundational knowledge, supplemented by exposure to AI-related content, to better align graduates with industry needs.

- **Input from Red Buffer Technologies:**

  Mr Syed Nauyan suggested that to include fostering an Agile mindset and exposing students to domains such as Human Resources, Finance, and Procurement.

- **Input from Confiz Pvt. Ltd.:**

  Mr Zain suggested that students gain practical, hands-on experience after completing their bachelor's degree and before pursuing further studies.

- **Input from S&P Global:**

  Mr. Qaiser emphasized the importance of enhancing students' overall professional capabilities. He highlighted the need to improve their communication skills, customer orientation, presentation abilities, motivation, and continuous technical upskilling to better align with industry expectations and workplace demands.

- **Input from ITnIS Consulting:**

  The introduction of certification courses and the possibility of open-book exams were proposed. It was also highlighted that graduates often focus on fixing symptoms rather than identifying root causes. There is a need to produce **"techno-commercial"** graduates—those who can simplify complex technical concepts for non-technical stakeholders.

- **Curriculum Development Suggestions:**

  The meeting also highlighted several recommendations for curriculum enhancement. These included the incorporation of live documentation practices to keep course content dynamic and up-to-date, and a stronger focus on teaching ethics, compliance, and data privacy laws to ensure students are aware of professional responsibilities. The introduction of cross-departmental minor courses—such as allowing SEECS students to take relevant courses at NBS—was also proposed to broaden students' academic exposure. Additionally, it was suggested that rather than creating entirely new courses, relevant new concepts could be integrated into existing ones to maintain flexibility and efficiency in curriculum development.

- **Closing Remarks:**

  The session concluded with remarks from the Associate Dean FOC, who underscored the importance of Ethics, Soft Skills, and Communication Skills in graduates. It was collectively

agreed that the number of internships and recruitment drives during open house events should be increased.
