School of Electrical Engineering and Computer Sciences
National University of Sciences and Technology

Faulty of Computing (FOC)
Industry Advisory Board Meeting Minutes
Held on 05th May 2026

In attendance

S.No.	Name	Designation/Organization/Company
1.	Dr. Muhammad Moazam Fraz (In-Chair)	Professor, Associate Dean FOC, NUST-SEECS
2.	Dr. Faisal Shafait	Professor, FOC, NUST-SEECS
3.	Dr. Imran Malik	Associate Professor, Head CS Department, NUST-SEECS
4.	Dr. Seemab Latif	Professor, FOC, NUST-SEECS
5.	Dr. Qaiser Riaz	Associate Professor, NUST-SEECS
6.	Dr. Momina Moetesum	Assistant Professor, HoD SE, NUST-SEECS
7.	Dr. Muhammad Bilal Ali	Assistant Professor, UG Coordinator, NUST-SEECS
8.	Dr. Hashir Moheed Kiani	Assistant Professor, FYP Coordinator, NUST-SEECS
9.	Dr. Mehdi Hussain	Associate Professor, HoD IS, NUST-SEECS
10.	Mr. Taufique ur Rehman	RVF, NUST-SEECS
11.	Dr Ayesha Maqbool	Assistant Professor, NUST-SEECS
12.	Ms. Mehvish Kiran	Lecturer, DLQEC SE Department, NUST-SEECS
13.	Mr. Umer Nasim	Software Engineer/ Department Coordinator, NUST-SEECS
14.	Mr. Hamayun Zafar	Anix Technologies
15.	Mr. Altaf Khan	Arte Analytics
16.	Mr. Shohaib Tariq	APIMATIC
17.	Mr. Kamran Mustafa	Elixer
18.	Mr. Ali Tariq	Byte Squad
19.	Mr. Asim Ghaffar	10Pearls
20.	Mr. Waleed Riaz	DPL
21.	Mr. Zain ul Hassan Khan	Confiz Pvt. Ltd.

Venue: SEECS Conference Room, Meeting time: 1400 hrs – 1600 hrs

Agenda Points / Discussion

- Dr Moazam greeted all the participants and provided an overview of the agenda items, the degree programs, the department's vision and mission, and how the curriculum is designed to achieve them.
- The Industry Advisory Board (IAB) meeting comprises industry representatives from prestigious companies and faculty members from SEECS. The IAB meetings aim to enhance academia-industry linkages and their impact through industry feedback on the design, development, delivery, and evolution of the curriculum for computing degree programs.
- The industry representatives briefed the house about their companies and the different products and technologies on which they are working.
- The meeting started with a discussion on the following points.
    - SEECS At A Glance
    - Key Highlights Since the Last IAB Meeting
    - Student Exposure
    - Pressing Issues Requiring IAB's Attention
- Periodic Continuous Quality Improvement (CQI) meetings are convened with the aim of enhancing the curriculum. During recent sessions, the department has reviewed and updated the Course Learning Outcomes (CLOs) and Bloom's Taxonomy (BT) levels for multiple courses. Furthermore, additional CLOs have been incorporated to encompass the psychomotor and affective domains, ensuring a balanced mapping of Program Learning Outcomes (PLOs). In alignment with these updates, laboratory rubrics have been adjusted to effectively evaluate the psychomotor and affective domains. Formal training sessions were conducted for Learning Engineers (LEs) and Faculty Members (FMs) to enhance their understanding of Outcome-Based Education (OBE).
- Revised Alumni Feedback and Employer Feedback forms were presented to the IAB for review. The board collectively agreed that the revised forms more effectively capture the skills and attitude that SEECS aims to instill in its graduates, and appreciated the effort undertaken to strengthen this feedback mechanism.
- During the past year, the Faculty of Computing (FOC) directed its attention towards prioritizing stream-based and hands-on electives within the domains of Artificial Intelligence, Cyber Security, and the Internet of Things.
- Dr Ayesha further briefed the house that students are actively encouraged to engage in national and international competitions such as the Microsoft Imagine Cup, Huawei ICT Innovation Competition, Google's coding competitions, and the Cisco Global Problem Solver Challenge, among others.
- Industrial visits are organized regularly to provide students with practical exposure to real-world industrial environments. These visits offer valuable insights into industrial

processes, technologies, and best practices, enhancing the students' understanding and complementing their academic learning.

- Dr Ayesha added that oral presentations have been made mandatory across all courses to enhance students' communication skills. Additionally, mock interviews are organized for final-year students to refine their interviewing skills and better prepare them for professional opportunities.
- Students are encouraged to pursue internships lasting at least 6 to 8 weeks upon completing their second and third years of their degree program.
- Approximately 85% of BSCS graduates have successfully secured opportunities in the industry, while 13% have chosen to pursue higher education.
- Based on industry recommendations from the last IAB, the curriculum has been updated to reflect current trends. The industry also emphasized the importance of product-based projects. Students are now actively encouraged to collaborate with industry for their projects. However, further efforts are needed to increase industry collaboration for Final Year Design Projects (FYDPs). In response to industry suggestions, students are now encouraged to file patents for their FYDPs. The NUST IP office offers comprehensive support in this regard.
- Dr. Ayesha solicited input from industry stakeholders for various aspects of curriculum enhancement and engagement. These include:
    - **Suggesting topics/content:** Industry professionals are invited to propose topics or content additions to the curriculum to ensure alignment with current industry needs and trends.
    - **Delivering guest lectures:** Industry experts are encouraged to deliver guest lectures for selected courses, sharing their practical insights and experiences with students.
    - **Incorporating complex engineering problems:** Advice is sought from the industry on how to effectively incorporate complex engineering problems into courses, enriching the learning experience.
    - **Offering internships and training:** Industry partners are invited to provide internship opportunities and training programs for students, as well as short-term placements for faculty members to stay updated with industry practices.
    - **Engaging in FYDPs:** Industry collaboration is encouraged by engaging students in industry projects through the Final Year Design Projects (FYDPs), fostering practical learning experiences.
    - **Improving lab components:** Industry advice is sought to enhance the lab components of courses, ensuring they align with industry standards and practices.

- **Providing industrial training and short courses:** Industry partners are encouraged to offer industrial training and short courses relevant to industry needs, supplementing students' education with practical skills and knowledge.

- Dr Moazam invited participants to share their thoughts. Mr Hamayun added that technology is changing so fast and you can't change the basic concepts. Basic courses shouldn't be dropped. Engineering knowledge and problem-solving skills should be in all students. He further added that good-quality projects were displayed in this open house. He emphasised that the internship mechanism should be improved along with faculty liaison with the industry.
- Mr. Altaf Khan emphasized the importance of enhancing students' soft skills and advocated for training initiatives focused on instilling ethical practices aligned with our cultural values. Teamwork abilities can be improved among the graduates.
- Mr Shoaib highlighted numerous gaps within our education system, emphasized the necessity of providing students with foundational knowledge, and improving their understanding of basic mathematical concepts.
- Mr. Kamran emphasized the importance of enhancing students' analytical skills to better prepare them for academic and professional success.
- Dr Moazam appreciated the feedback from the industry and mentioned that due efforts would be taken by the department to implement the suggested points.
