Respected Faculty Members,

I hope this email finds you well.

It is the start of **Fall-2025 Semester** and we have to fulfill the requirements of **Pakistan Engineering Council (PEC)** for **BESE program** accreditation . For this purpose, each semester project should be formalized as a **Complex Engineering Problem (CEP)**, and one of the advanced labs should be formalized as an **Open-Ended Lab (OEL).**

It is my humble request that all respected faculty members teaching **3+1 / 2+1 courses** of the **BESE program** kindly map their semester project into **CEP**. Similarly, please select one advanced lab as an **OEL**, where students are encouraged to analyze the problem and prepare a complete solution using different tools and technologies.

As per PEC requirement, we also need to keep proof of CEP and Open-Ended Lab in our **course folders and lab folders**. This proof includes **marking rubrics** and examples of **best, average, and worst cases**. The DoC office will not be able to accept any folder (course or lab) without these requirements for **Fall 2025 BESE program**.

This is a very important task for addressing PEC concerns, and I am sure with your support we will achieve it successfully.For your convenience, a **template and helping material** is attached with this email.

I am very thankful for your kind cooperation and continuous support.

Best Regards,

UG Coordinator SE
